Feature Upgrade: WiFi Snow Melting Control 671

tekmar is now pleased to announce the availability of the Auto Storm feature for the WiFi Snow Melting Control 671. With this capability, customers will benefit from a fast response time and a lower operating cost since the control automatically pre-heats the slab based on an internet weather service. The Auto Storm has the same operation for both the 670 and 671 controls, which provides consistency on user experience and installation.

Availability

For controls with internet connectivity that are already installed in the field, an automatic firmware update that includes the Auto Storm feature has been deployed. This can be seen in firmware version 1.9.0 or newer. Customers are not required to implement any further action to update their 671 already in the field. All new controls that are being shipped to customers include the firmware compatible with the Auto Storm feature.

Price

The price of the 671 will remain unchanged.

Literature

The 671 Marketing collateral and web page will be soon updated to include the Auto Storm feature.

If you have further questions or comments, please contact tekmar technical support by email at tekmar.customerservice@wattswater.com or by phone at 1-800-438-3903.
