

Intelligent Water Management For Your Innovation Water Heater

Real-time monitoring, insights, and alerts – at no cost!

Nexa is the advanced sensing technology and robust software platform from Watts, and it is now compatible with AERCO's Innovation water heaters. Nexa's cutting-edge sensing technology and powerful software platform reveal hidden insights and potential risks in your commercial building's plumbing and hydronic systems.

The best part? It's free and easy to connect your Innovation water heater to Nexa!

Why Choose Nexa?

Solve Issues Quickly
with Real-Time Alerts

Uncover More
Energy Savings

Streamline Operation
and Maintenance

Get System Insights
for Plant Optimization

Empower Your Team with Nexa

Optimize Plant Performance

Identify energy-saving opportunities by trending multiple data points including cycles per hour, a host of temperature readings, blower output, and more. With Nexa, you have a wealth of real-time data to help you optimize system performance and minimize efficiency losses.

- Increase reliability and system performance
- Trend multiple data points to identify energy-saving opportunities
- Reduce your fuel bills significantly

Reduce Service Calls

Nexa reduces unscheduled maintenance by helping you identify and fix potential issues early. It can also help you rule out the heating equipment when the source of an issue stems from elsewhere in the system. This results in fewer emergency calls, reduced labor costs, and convenient scheduling of maintenance.

- Resolve issues quickly and prevent more serious ones from developing
- Schedule service at your convenience and minimize facility disruptions
- Submit maintenance/service and startup forms via the Nexa platform

Prevent Premature Equipment Failure

Nexa lets you easily monitor equipment performance to ensure it operates at peak performance. Instant alerts inform you of a decline in performance, so you can proactively resolve issues before they develop into costly repairs and lost revenue from facility downtime.

- Avoid lost revenue from downtime due to undetected equipment issues
- Prevent unnecessary wear-and-tear of your equipment and extend system life
- Generate reports that aid in decision-making and cost-saving improvements

Connect to Nexa! It's Easy and Free
