tekmar Features the Best in Snow Melt Control

Vernon, BC. June 24, 2013 – tekmar Control Systems, a Watts Water Technologies company, has added two new products to its Snow Melting performance series to offer better options and flexibility to HVAC system designers. The Snow Melting Control 654 and the Snow Sensor 095 are now available for purchase, and orders will begin shipping tomorrow.

The Snow Melting Control 654 is a new communicating control designed to operate electric or hydronic equipment to melt snow or ice from any surface, including driveways, walkways, patios, business entrances, parking ramps, loading docks, hospital entrances, helipads, or car wash bays. The surface temperature for snow melting is controlled

automatically to reduce operating energy costs. The 654 has an automatic start and stop function when used with the Snow / Ice Sensor 090 or 094. Automatic start with a timed stop is available when used with the Snow Sensor 095.

The Snow Sensor 095 is an aerial mounted sensor that detects falling snow and allows a tekmar Snow Melting Control to automatically start the snow melt system. System stop is provided by the control's timer or by manual disable. The 095 is well suited to adding automatic start to an existing snow melt system and complements the existing line of in-slab Snow / Ice Sensors 090 and 094.

"In-slab snow and ice sensors are still the best option for detection; however, for installations where the in-slab snow and ice sensor 090 or 094 were not installed, the new Snow Sensor 095 makes automatic start of an existing snowmelt system possible," said Greg Leupin, sales & marketing manager for tekmar. "The option to mount this sensor anywhere after installation makes this sensor a perfect retrofit solution," added Leupin.
